Natural History Object Lessons; A Manual for Teachers (Paperback)

By George Ricks

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1891 Excerpt: .digested food now enters the small intestine, where it gets mixed with the intestinal juice, with the bile from the liver, and with another juice from the pancreas, and these complete the digestive process. The digested food is taken up by little hair-like projections on the inner coat of the intestines, called villi. These villi are full of little tubes--the lacteals--which carry the milkylooking food through a number of glands, and then unite to form one common duct, which passes upwards through the chest and opens into a vein in the neck. The liver, a large Fig. 118.--Diagram of the Circulation. The internal organs of all vertebrate animals are constructed pretty much on the same plan as in man, and they serve similar purposes. As might be expected, however, from his superior intelligence, the brain of man is much larger in proportion to his size than...
