Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1905 Excerpt: .and twitchings develop in dogs after injection of kreatinin. CI. Bernard, Traube, Rankc, Astaschewsky, Feltz and Ritter, and others attribute the phenomenon to an accumulation of the neutral potassium-salts; Schottin and Oppler suggest the accumulation of normal or abnormally decomposed extractives, Thudichum that of the oxidation-stages of the urinary pigment. Possibly many substances and their decomposition-products act in conjunction. R. Fleischer found a reduction in the elimination of sulphuric and phosphoric acids in advance of the uremic attack in man. On placing various substances occurring in the urine--kreatinin, kreatin, acid potassium phosphate, uratic sediment from human urine--directly upon the surface of the cerebrum, Landois observed the development of all signs of uremia. There occurred, particularly, fully developed convulsive seizures, with intervals of rest, in dogs, with subsequent coma. Also, many other secondary phenomena of uremic eclampsia could be thus induced. Urea is inactive in this direction, ammonium carbonate, leucin, sodium carbonate, sodium chlorid, potassium chlorid, feebly active. After long-continued excessive ingestion of food, together with the use of spirit, and slight activity, there occurs, principally in conjunction with respiratory disorders, derangement of metabolism, and not rarely a marked accumulation of uric acid in the blood. The latter is deposited in the joints and their ligaments and cartilages, principally of the foot and the hand, and gives rise to inflammatory and painful attacks--gouty nodules, uric arthritis. Rarely, the kidneys, the heart, and the liver are involved. In the vicinity of the foci, the tissues undergo necrosis. Food...
