Science Myths We Tell Ourselves (Hardback)

By William N Barbat

Outskirts Press, United States, 2015. Hardback. Book Condition: New. 254 x 178 mm. Language: English . Brand New Book ***** Print on Demand *****.The author debunks many science concepts like the Big Bang, Instant Creation, Continental Drift, and Spreading Sea Floors, which are shown to be really just myths. A Big Bang explosion would require an escape velocity for galaxies of 1,000,000,000,000,000,000,000,000 times the speed of light. But more damaging to mankind is the myth that energy cannot be created in nature or by man. Few people know that Helmholtz s Energy Conservation Law was rejected as metaphysics in 1847 by the Berlin Physics Society, but that gullible scientists have accepted it anyway. So the extra energy from Low-Mass Electrons is wrongly attributed to mythical lattice vibrations, yet it had generated electric power a century ago and could be used to avert climate change. The unappreciated creation of energy in nature is shown by Larmor s 1897 formula for photon radiation from moving charges. All orbiting electrons and spinning protons continually create photons, which possess heat and mass, and they can split into electrons and positrons to provide the building blocks of matter in stars. Larmor heat photons replace the...
